Art Unit: 1746

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 16-19 and 27-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lemelson (U. S. Pat. No. 3,154,890) in view of either Harris (U. S. Pat. No. 2,848,672) or Olsson et al. (U. S. Pat. No. 6,153,964).

Re claims 27, 30 and 31, Lemelson is cited disclosing all of the claimed subject particularly a wet treatment nozzle comprising:

an ultrasonic cleaner comprising a housing, an ultrasonic transducer (16) placed on a bottom surface of the housing,

an introduction passage (18) for introducing a treatment liquid on a side of the ultrasonic cleaner;

an exhaust passage (19) which exhausts the treatment liquid on an other side of the ultrasonic cleaner after a wet treatment of an object to be treated, the exhaust passage exhausting the treatment liquid that wet treated the object;

wherein the ultrasonic cleaner, while vibrating, guides the treatment liquid to wet treat the object to be treated,

wherein a pressure controller (col. 3, lines 50-64) that differs from the claim only in the recitation of the pressure being controlled so that the treatment liquid in contact with the object does not flow outside of the exhaust passage after wet treatment and the weight on the housing with the weight minimizing propagation of energy from

Art Unit: 1746

the ultrasonic transducer to a wall of the housing by shifting the characteristic frequency of the wall of the housing. The patent to Harris (as at 33, 50) and Olsson (as at 9) are each cited disclosing sonic arrangements, where the sonic arrangements are provided with a weight for controlling the propagation of the ultrasonic waves as is common the in sonic/vibrator art. It therefore would have been obvious to one having ordinary skill in the art to modify the ultrasonic cleaner in Lemelson, to include a weight as taught by either Harris or Olsson, for the purpose of increasing the efficiency and stability of the transducer and the efficacy of the sonic wave transmission since it is old and know in the are to remove parasitic/interfering waves. As for the pressure being control as claimed, given the corresponding structure in Lemelson, to have the pressure controlled as claimed is of little patentable weight (see MPEP 2114 APPARATUS CLAIMS MUST BE STRUCTURALLY DISTINGUISHABLE FROM THE PRIOR ART

>While features of an apparatus may be recited either structurally or functionally, claims<directed to >an< apparatus must be distinguished from the prior art in terms of structure rather than function. >In re Schreiber, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429,1431-32 (Fed. Cir. 1997) (The absence of a disclosure in a prior art reference relating to

function did not defeat the Board's finding of anticipation of claimed apparatus because the limitations at issue were found to be inherent in the prior art reference); see also In re Swinehart, 439 F.2d 210, 212–13, 169 USPQ 226, 228–29 (CCPA 1971); In re Danly, 263 F.2d 844, 847, 120 USPQ 528, 531 (CCPA 1959). [A]pparatus claims cover what a device is, not what a device does." Hewlett-Packard Co. v. Bausch &

Lomb Inc., 909 F.2d 1464, 1469, 15 USPQ2d 1525, 1528 (Fed. Cir. 1990) (emphasis in original).

MANNER OF OPERATING THE DEVICE DOES NOT DIFFERENTIATE APPARATUS CLAIM FROM THE PRIOR ART

Application/Control Number: 10/650,393

Art Unit: 1746

A claim containing a "recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus" if the prior art apparatus teaches all the structural limitations of the claim. Ex parte Masham, 2 USPQ2d 1647 (Bd. Pat. App. & Inter. 1987) (The preamble of claim

1 recited that the apparatus was " for mixing flowing developer material" and the body of the claim recited " means for mixing ..., said mixing means being stationary and completely submerged in the developer material". The claim was rejected over a reference which taught all the structural limitations of the claim for the intended use of mixing flowing developer. However, the mixer was only partially submerged in the developer material. The Board held that the amount of submersion is immaterial to the structure of the mixer and thus the claim was properly rejected.).

Re claims 16-19 and 29, to position the weight at various locations, or to have the same of different including wall thickness (size), is deemed to be an obvious matter of design in view of the corresponding structure in either Harris or Olsson. This is considered to be a mere rearrangement of parts and a change in size (see MPEP 2144.04 REVERSAL, DUPLICATION OR REARRANGEMENT OF PARTS and MPEP 2144.04, CHANGES IN SIZE, SHAPE, OR SEQUENCE OF ADDING INGREDIENTS). This is also deemed applicable to the subject matter of claims 28 and 32.

3. Applicant's arguments with respect to the pending claims have been considered but are moot in view of the new ground(s) of rejection. In regard to the remarks on the Lemelson reference, namely that Lemelson fails to disclose the pressure controller as claimed, note that Lemelson disclose the use of a "computer, to <u>also</u> control the position". It is the examiner's position that both the pressure <u>and</u> position are computer controlled. Automated control systems, may control various operations in many programmed scenarios as desired.

Application/Control Number: 10/650,393

Art Unit: 1746

4. The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure. In Elbert et al., note the weights

5. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to FRANKIE L. STINSON whose telephone number is

(572) 272-1308. The examiner can normally be reached on M-F from 5:30 am to 2:00

pm and some Saturdays from approximately 5:30 am to 11:30 am.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Michael Barr, can be reached on (571) 272-1700. The fax phone number

for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
